

IMPACT ARCHITECTURE

Engaging with organisations and communities to co-design solutions that create social, economic and environmental impact. Organisations and communities are under increasing pressure to couple social responsibility with economic growth whilst taking greater responsibility for their ecological footprint.

IPP apply our unique model of Impact Architecture to co-design solutions and transformation roadmaps that utilise innovative technologies and create enhanced human experiences.

These solutions support organisations on their journey from Risk to Resilience and enable them to apply the principles of social, economic and environmental sustainability, be adaptable and change ready.

HUMAN CENTERED CO-DESIGN

Embracing the principles of co-design, all are respected as equal partners. Bringing together people to gather their insights and ideas can be the means to better understanding the way they think, feel, behave and interact. From experts to end users all are encouraged to participate. Through the sharing of lived experience and professional expertise, solutions can be designed that deliver positive experiences and can be owned by all.

INCLUSION, SAFETY AND WELLBEING

The rising incidence of threats to personal safety and wellbeing are amongst the most pressing global issues for individuals, organisations and governments. We have the opportunity to see things from a different perspective: one that is inclusive, places those who are vulnerable or at risk in the centre, and focuses on their safety, wellbeing and recovery. IPP's comprehensive risk assessments and Human Centered Co-design process inform bespoke solutions that enable our partners to keep individuals connected, safe and healthy in their homes, workplaces and communities.

CONNECTED COMMUNITIES

Technology has revolutionised the way people are able to overcome the barriers often associated with distance, isolation and diversity. Convenience, accessibility and equality are the essence of any connected community. Transformational change must now facilitate stronger relationships across all relevant organisations and strengthen government, non-government and corporate partnerships. IPP's integrated infrastructure, virtual response and technology solutions are fast becoming the enabler of engaged, connected and resilient organisations and communities.

CORPORATE SOCIAL IMPACT

Corporate and community leaders are recognising the benefit of shaping and aligning their vision and strategies to achieve a shared social, economic and environmental impact. IPP's Impact Architecture methodology enables corporate partners to design social impact strategies that support them to reduce risk, transform relationships, be recognised as an employer of choice and increase brand differentiation.
