

SECURITY ENGINEERING

Protecting people, infrastructure and information from internal and external threats, risks and environmental influences.

A complex threat and risk landscape continually changes and requires on-going analysis and mitigation expertise. We support our clients to build understanding of their risks and threats to ensure they make informed decisions and implement strategies tailored to their specific risk environment.

We use our expertise, the most innovative techniques and a harm minimisation approach to manage projects from risk assessment to final solution commissioning, project roll out and assessment of results.

RISK ASSESSMENT & ASSURANCE

IPP encourages our partners to step beyond compliance to adopt a holistic focus on assurance. Utilising a range of leading practice methodologies, diagnostic, audit and investigation tools, our experienced project consultants can provide detailed evaluations, recommendations, policies and procedures relating to challenges, risks and improvement opportunities.

SECURITY INFRASTRUCTURE & DESIGN

IPP designs comprehensive security technology solutions encompassing recommendations on access control, intruder detection, CCTV, surveillance and incident alert. Our experienced Security Engineering team has the expertise to construct risk minimisation solutions for building and critical infrastructure projects within a diverse range of industries.

CORPORATE INVESTIGATIONS & ELECTRONIC BUG SWEEPS

With a team specialising in business surveillance, counter espionage services and fraud investigations, IPP combines the latest technology, surveillance and forensic services to provide evidence for our clients on which to make informed business decisions. Using advanced digital equipment to conduct electronic bug sweeps and detect spyware, IPP can reduce financial losses and damage to your business reputation arising from information leaks, and implement processes to identify future attempts at espionage.

HIGH SECURITY SCEC AND RADIATION SECURITY

With a team of SCEC (Security Construction and Equipment Committee) endorsed Consultants, we are trusted to provide advice to Australian Government departments, agencies and military and to design appropriate physical and electronic security measures in line with the requirements of the Protective Security Policy Framework.

With Australia's first consultant registered under the National Radiation Security Advisors Accreditation Scheme, IPP's Radiation Security team undertake site assessments and provide recommendations to organisations that have a radioactive source which they must protect. Understanding the risks and having an emergency plan in place will decrease the likelihood of unauthorised access to, or acquisition of, radioactive sources by persons with malicious intent.
