

TECHNOLOGY TRANSFORMATION

Transitioning traditional organisations into environments which increase engagement, productivity and innovation.

The creation of spaces that get the best from people is our priority, including physical spaces that encourage multi-talent collaboration, virtual spaces where people across different locations can come together, and individual spaces where people can take time away from their daily activities to focus on strategic possibilities.

The same transformative approach applies as flexibility continues to drive business expansion. As people work at home, in transit and at remote offices they require greater connectivity, security and virtual integration.

TRANSFORMATIONAL BUILDING DESIGN

In the new era of SMART building design and construction, IPP leads the construction industry in the provision of interactive technology solutions. Transcending the traditional 'one size fits all' approach, we create dynamic and connected workspaces and facilities with the integration of advanced information, communication and security technologies.

AUDIO-VISUAL AND COMMUNICATIONS TECHNOLOGY

IPP is expert at removing communication barriers and replacing them with enabling technologies. The evolution of the mobile workforce highlights a growing desire to reduce geographic workplace isolation, and creates an increased expectation to be able to connect in real time. We provide intuitive and integrated communication solutions; voice and data network integration, audio visual, conferencing systems and cabling across large and complex networks.

NETWORK INFRASTRUCTURE

Networking is the essential fabric for connecting people with information. IPP are experienced in the design and implementation of large and complex voice and data networks. This includes wide and local area networks, contact centers, Interactive Voice Responses, WIFI connectivity, Internet Protocol Telephony and core network designs. Leveraging the latest advances in networking speed and flexibility leads to more productive and collaborative workforces, better utilisation of staff and significant cost savings.

INFORMATION TECHNOLOGY STRATEGY

IPP offers a range of services to enhance, refresh or connect Information Technology systems and infrastructure. We facilitate projects of varied size and complexity from small system implementations to large scale strategic transformation. IPP's services include project conception, design, technology relocation, cloud strategy, enterprise architecture, procurement and implementation.
